

## **Reflection**

My expectations for this subject are to teach us how to use autocad properly. I also expect a student friendly teaching that helps us understand the topics easily and gives us a lot of uncommon knowledge towards the subject. I want to learn the possible outputs or projects I can make by using autocad, some people I know told me that it can be use to earn money, I just need to learn how to use it. I want to gain knowledge on the basics and also the complex function of this program. I want our teacher to teach us the basics, tricks, and other tips in using autocad. I will also try my best to absorb the teachings in this subjects, I will try my best to absorb every knowledge given by our teacher.
